

# ABSTRACT

A flame-retardant thermoplastic resin composition comprising at least a plant-derived resin (A) and a flame retardant (B), wherein the weight  
5 proportions of the individual components in the flame-retardant thermoplastic resin composition are:

$$30 \leq W_1 < 55.5$$

$$44.5 < X_1 \leq 70$$

wherein  $W_1$  is the percentage by mass of the plant-  
10 derived resin (A) and  $X_1$  is the percentage by mass of the flame retardant (B), and 90% by mass or more of the flame retardant (B) is composed of a metal hydrate containing an alkali metal-based substance in an amount of 0.2% by mass or less.
